

- DSMP, $\eta = 0$, no graph terms, covariate-calibrated P (Eq. 3 with severity)
- DSMP reported configuration, covariate-calibrated P
- DSMP, $\eta = 0$, no graph terms, Platt-recalibrated count proxy
- DSMP reported configuration, Platt-recalibrated count proxy
- Greedy probability-consequence, covariate-calibrated P
- Greedy probability-consequence, uncalibrated proxy
- Robust TOPSIS MCDA

- Static RCM-like (severity and class), same action rule
- DSMP with true P_f (upper bound)
- Covariate-calibrated P (Eq. 3 with severity), within-seed cross-fit
- Covariate-calibrated P , trained on independent seeds
- Platt-recalibrated count proxy (reported)
- Simulated true probability
